

# ASUNA TOKEN WHITEPAPER

Version 2.1 - April 2022 - English

アスナトークン

© Asuna Token - All rights reserved

# Our Potential

The [Asuna Token](#) was launched on October 14th, 2021 on the Ethereum blockchain.

With all the hype for anime tokens, our team is positioned to do something special in the crypto world by taking a project that started off with a lot of potential and is currently exceeding our own expectations. [Asuna is creating something unique with an immense scope of progression.](#)

What started off as a [community](#) is progressively turning into a [family](#) of like minds.

# The Community

Since the beginning of 2022, the community took control of the project. Now it is up to us as a community to lead the way.

**If you want to be a part of the expected **growth**, join our community of holders.**

As our community grows, it will not only benefit the current holders, but it will give **investing opportunities** and possible **financial freedom** to the next generation of crypto traders.

**Just because the crypto industry is still taking youthful steps in evolution, it does not mean that wealth and financial freedom should not belong to everyone.**

This is a chance for you to grasp the opportunity with both hands as part of an amazing community. What could be more satisfying than that?

Only 3% of the world's population take crypto seriously enough to invest.

**This means that you are still an early investor and Asuna exists to bridge the gap between you and financial freedom.**

# Tokenomics

Our **redistribution mechanism** is an incentive meant to encourage investors to **HOLD**.

By simply buying and holding you will accumulate residual earnings **from every buy and sell transaction** made.

**2% Redistribution** on every transaction. You will Earn Asuna just by holding it! The more you have, the more you receive.

**4% Marketing**. With each buy you help the token to grow with marketing action and partnership with specialist in development in the crypto world.
